DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 3. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hans Sick (GB 2063147) in view of Mattos et al. (6,124,551).

Hans Sick discloses a cable (Figure 1) comprising a cylindrical core and a jacket (3) surrounding the core, the jacket comprising at least one spline projecting

Art Unit: 2831

inward from an inner surface of the jacket, and the relative movement of the jacket with respect to the core being prevented (page 1, lines 64-65). Hans Sick also discloses the at least one spline comprising a plurality of splines projecting inward from the inner surface of the jacket (re claim 3), the spline being continuously extending on the inner surface of the jacket (re claims 4 and 13), the spline extending along a longitudinal axis of the core (re claims 5 and 14), the jacket being extruded over the core (re claims 6 and 15), the at least one spline comprising at least two or four splines equally spaced from one another (re claims 7, 8, 16, 17 and 20), the spline projecting radially inwardly from the inner surface of the jacket (re claims 9 and 18), and the at least one spline comprising a plurality of splines (re claim 11) projecting inward from the inner surface of the jacket (re claim 12).

Hans Sick does not disclose the core comprising a plurality of twisted pairs of insulated wires and a round central core filler such that at least a portion of at least one twisted pair is positioned between the spline and the center of the core (re claims 1, 10 and 19). Mattos et al. discloses a cable (Figure 2) having a core comprising a plurality of twisted pairs of insulated wires and a round central core filler. It would have been obvious to one skilled in the art to include a plurality of

twisted pairs of insulated wires and a round central core filler as taught by Mattos et al. in the core of Hans Sick to provide a data communications cable.

Response to Arguments

4. Applicant's arguments with respect to claims 1, 10 and 19 have been considered but are moot in view of the new ground(s) of rejection.

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chau N. Nguyen whose telephone number is 571-272-1980. The examiner can normally be reached on Mon-Fri.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dean Reichard can be reached on 571-272-2800 ext 31. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
